

STRAND NEEDLES

Header Threaders

Pushing strand through headers is one of the most cumbersome and difficult processes when setting-up a long-line bed. That process just got easier with Hamilton Form's strand needles.

Strand needles are steel rods with a receiver at one end sized for 1/2" or .6" strand. Use them to guide strand through the headers, quickly and easily.

No more wrestling strand through headers. Line-up your headers, thread 'em and push your strand on through.

Customers have reported saving hours of set-up time when using these needles to pre-feed their headers.

This patented product saves time and effort and is available only from Hamilton Form.
